

Order Picker Forklift Part

Order Picker Forklift Parts - Order picking is likewise called order preparation operation. This is among the chief processes within a warehouse and consists of people known as order pickers, collecting and taking articles in a certain quantity previous to shipment in order to complete customer orders. Order picking is a simple warehousing process. The effectiveness in which this job is done can be directly linked to a supply chain's productivity. Therefore, order picking is amongst the most controlled logistic processes. Order picking falls within the category of the warehouse management system.

There are several certain kinds of order picking. The main types include: pick to box method, wave picking method, picker to part method or piece picking, zone picking method and sorting systems method.

The pick to box method consists of the order picker filling the box with the items from his or her station. The box then moves to other picking locations until the client order is done. In this particular technique, there is no movement of the order picker staff. In the wave picking method, the order pickers move all-around in order to gather the needed products for several orders. The piece picking or picker to part method is similar where the order pickers or picker move to collect the stuff required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, products are brought to the orderpicker by an automatic system such as a conveyor system or an automatic storage system. In the zone picking method, each order picker is assigned to one specific area. They are responsible for just realizing order picking in this specific area.
