

Carriage Roller

Carriage Rollers - Carriage rollers are specially designed bearings which are utilized on lift masts to be able to help them perform in challenging environmental surroundings. Lift masts are frequently subjected to oscillations, shocks, high dynamic and vibrations and static loads. This equipment is frequently exposed to environmental influences like dust, cold, heat, contamination, aggressive ambient air and moisture. Thus, the lift masts' guidance arrangements must be specifically strong and have a specific high load carrying capability.

Carriage rollers have been created as the answer for functioning in different environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts must be economical and maintain operational security while having the ability to handle a particularly high load carrying capacity.
